

Assignment: 14

Problem Statement: Create an Elastic IP for an Instance.

Step 1: Create an EC2 instance as we've created before.

Launch an instance [Info](#)

Amazon EC2 allows you to create virtual machines, or instances, that run on the AWS Cloud. Quickly get started by following the simple steps below.

Name and tags [Info](#)

Name: [Add additional tags](#)

Application and OS Images (Amazon Machine Image) [Info](#)

An AMI contains the operating system, application server, and applications for your instance. If you don't see a suitable AMI below, use the search field or choose [Browse more AMIs](#).

Quick Start

Amazon Linux, macOS, **Ubuntu**, Windows, Red Hat, SUSE Linux, Debian

Amazon Machine Image (AMI)

Ubuntu Server 24.04 LTS (HVM), SSD Volume Type
ami-05d2839d4773aafb (64-bit (x86)) / ami-0f6c99577b93a642b (64-bit (Arm))
Virtualization: hvm ENA enabled: true Root device type: ebs

Summary

Number of instances:

Software Image (AMI)
Canonical, Ubuntu, 24.04, amd64...[read more](#)
ami-05d2839d4773aafb

Virtual server type (instance type)
t3.micro

Firewall (security group)
New security group

Storage (volumes)
1 volume(s) - 8 GiB

[Cancel](#) [Launch instance](#) [Preview code](#)

Key pair (login) [Info](#)

You can use a key pair to securely connect to your instance. Ensure that you have access to the selected key pair before you launch the instance.

Key pair name - required: [Create new key pair](#)

Network settings [Info](#) [Edit](#)

Network [Info](#)
vpc-086ab558a538b225b

Subnet [Info](#)
No preference (Default: subnet in any availability zone)

Auto-assign public IP [Info](#)
Enable

Firewall (security groups) [Info](#)
A security group is a set of firewall rules that control the traffic for your instance. Add rules to allow specific traffic to reach your instance.

☐ Create security group ☒ Select existing security group

Common security groups [Info](#)
 [Compare security group rules](#)

SoyabSecuritygroup sg-01b66eabcc1495ac9
VPC: vpc-086ab558a538b225b

Summary

Number of instances:

Public IPv4 address pool

Amazon's pool of IPv4 addresses

Public IPv4 address that you bring to your AWS account with BYOIP. (option disabled because no pools found) [Learn more](#)

Customer-owned pool of IPv4 addresses created from your on-premises network for use with an Outpost. (option disabled because no customer owned pools found) [Learn more](#)

Allocate using an IPv4 IPAM pool (option disabled because no public IPv4 IPAM pools with AWS service as EC2 were found)

Network border group

Info

ap-south-1

Global static IP addresses

AWS Global Accelerator can provide global static IP addresses that are announced worldwide using anycast from AWS edge locations. This can help improve the availability and latency for your user traffic by using the Amazon global network. [Learn more](#)

Create accelerator

Tags - optional

A tag is a label that you assign to an AWS resource. Each tag consists of a key and an optional value. You can use tags to search and filter your resources or track your AWS costs.

No tags associated with the resource.

Add new tag

You can add up to 50 more tag

The screenshot shows the AWS Management Console interface for an Elastic IP address. The breadcrumb navigation at the top reads: EC2 > Elastic IP addresses > 43.205.6.170. The left-hand navigation pane lists various AWS services, with 'Network & Security' expanded to show 'Elastic IPs'. The main content area displays the details for the Elastic IP address 43.205.6.170. It includes a 'Summary' section with the following information:

Field	Value
Allocated IPv4 address	43.205.6.170
Association ID	-
Network interface ID	-
Address pool	Amazon
Type	Public IP
Scope	VPC
Network interface owner account ID	-
Network border group	ap-south-1
Allocation ID	eipalloc-085a704f482ba3f87
Associated instance ID	-
Public DNS	-
Service managed	-
Reverse DNS record	-
Private IP address	-
NAT Gateway ID	-

Below the summary, there is a 'Tags(0)' section with a 'Manage tags' button. A message states: 'No tags associated with this resource. Click the Manage tags button to add your first tag.' The bottom of the console shows the footer with copyright information: '© 2020, Amazon Web Services, Inc. or its affiliates. Privacy Terms Cookie preferences'.

The screenshot shows the 'Associate Elastic IP address' dialog box in the AWS Management Console. The breadcrumb navigation at the top reads: EC2 > Elastic IP addresses > 43.205.6.170 > Associate Elastic IP address. The dialog box is titled 'Associate Elastic IP address' and contains the following information:

Elastic IP address: 43.205.6.170

Resource type
Choose the type of resource with which to associate the Elastic IP address.

☒ Instance
☐ Network interface

Instance
Choose an instance

Private IP address
The private IP address with which to associate the Elastic IP address.
Choose a private IP address

Reassociation
Specify whether the Elastic IP address can be reassociated with a different resource if it already associated with a resource.
☐ Allow this Elastic IP address to be reassociated

At the bottom right of the dialog box, there are 'Cancel' and 'Associate' buttons. A warning message is displayed in a yellow box: 'If you associate an Elastic IP address with an instance that already has an Elastic IP address associated, the previously associated Elastic IP address will be disassociated, but the address will still be allocated to your account. Learn more.' Below this, a note states: 'If no private IP address is specified, the Elastic IP address will be associated with the primary private IP address.'

Step 4: Check the Instance IP has been changed as same as the newly created Elastic IP.

The screenshot displays the AWS Management Console interface for an EC2 instance. The left sidebar shows the navigation menu with categories like Instances, Images, Elastic Block Store, Network & Security, and Load Balancing. The main content area shows the 'Instance summary for i-0f449c98820a8298e (my-web-service)'. The instance is in a 'Running' state. A tooltip indicates that the Elastic IP address '43.205.6.170' has been copied. The instance details include:

- Instance ID:** i-0f449c98820a8298e
- Public IPv4 address:** 43.205.6.170 | open address
- Instance state:** Running
- Private IPv4 addresses:** 172.31.36.205
- Public DNS:** ec2-43-205-6-170.ap-south-1.compute.amazonaws.com | open address
- Private IP DNS name (IPv4 only):** ip-172-31-36-205.ap-south-1.compute.internal
- Instance type:** t3.micro
- VPC ID:** vpc-086ab558a538b225b
- Subnet ID:** subnet-004a4b3482d1d5069
- Instance ARN:** arn:aws:ec2:ap-south-1:376861031452:instance/i-0f449c98820a8298e
- Hostname type:** IP name: ip-172-31-36-205.ap-south-1.compute.internal
- Answer private resource DNS name:** IPv4 (A)
- Auto-assigned IP address:** -
- IAM role:** -
- IMDSv2:** Required
- Operator:** -

At the bottom, there are tabs for Details, Status and alarms, Monitoring, Security, Networking, Storage, and Tags. The footer shows the AWS logo, CloudShell, Feedback, Console Mobile App, and copyright information for Amazon Web Services, Inc. or its affiliates.

So, we've successfully Created an Elastic IP for an instance.

At last Delete(Disassociate > Release) the Elastic IP and the created instance.
